

Assignment 2: MPI

Elijah Kin

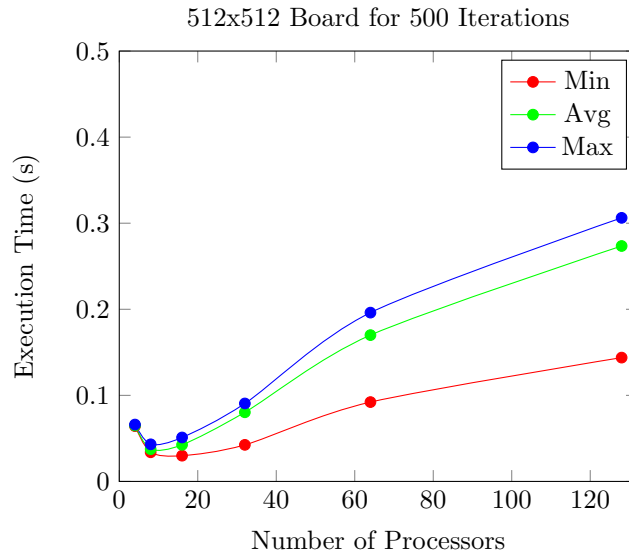

October 10, 2024

Performance Results

Running the program on the 512x512 board for 500 iterations as a benchmark, we measure the following execution times on Zaratan.

Processes	4	8	16	32	64	128
Min (s)	0.064236	0.03386	0.029902	0.042488	0.092184	0.14385
Avg (s)	0.0649503	0.0374385	0.0425478	0.0803294	0.169988	0.273515
Max (s)	0.066074	0.043119	0.051057	0.090568	0.196102	0.306212

We also display the same data in a line plot below.

Observe that the plots for Avg and Max are quite close to each other, suggesting an approximately equal work distribution. Further, we expect that in the limit, Min is approximately half of Avg, since the first and last processes only communicate half as much as the others.
